SUMMARY

AI & ML Engineer with hands-on experience building production-grade deep learning and NLP systems. Skilled in end-to-end model development — from training CNNs, RNNs, and Transformer-based models to deploying via FastAPI and Streamlit. Proficient in TensorFlow, Keras, scikit-learn, and Python with a proven ability to deliver AI solutions under real-world constraints.

EDUCATION

Jain Deemed-to-be University, Bengaluru Bachelor of Technology in Artificial Intelligence and Machine Learning GPA: 8.6/10	Bengaluru, India Aug '24 - present
X (RBSE) ,The Sunbeam Secondary School Percentage: 74.67%	Rajasthan, India Mar '21 – Mar '22
XII (RBSE) ,The Sunrise Public School Percentage: 81.4%	Rajasthan, India Mar '23-Mar '24

PROJECTS

Data Analysis AI Platform (Collaborative Project) | Python, Flask, RAG, ChromaDB, HTML/CSS/JS | [GitHub](#)

- Developed a full-stack AI-powered data analysis platform with a team of 4, securing 2nd place at CIT Hackathon 2026 among 90+ competing teams
- Architected end-to-end pipeline across 5 modules — preprocessing → vector search → Flask backend → web frontend, deployed via GitHub Actions across 39+ commits
- Enabled intelligent document search across 1000+ documents reducing query response time by ~40%

Plant Disease Detection API | Python, TensorFlow, FastAPI, Pillow, Uvicorn | [GitHub](#)

- Engineered a CNN-based image classification system using TensorFlow achieving 94%+ accuracy across 15+ plant disease categories via a FastAPI REST endpoint
- Migrated model from .h5 → .keras for TF 2.15 compatibility, reducing inference setup time by 35% through streamlined multipart image ingestion pipeline supporting uploads up to 10MB

Neural Machine Translation System | Python, PyTorch, HuggingFace Transformers, Gradio | [GitHub](#)

- Built an end-to-end multilingual NMT pipeline using pretrained Transformer encoder-decoder models (MarianMT, NLLB-200) for real-time English to Hindi and Kannada translation
- Designed a multi-model registry architecture supporting heterogeneous model families with custom BPE tokenization pipelines and forced BOS token decoding for accurate Kannada (kan_Knda) target generation
- Deployed GPU-accelerated inference on PyTorch CUDA (RTX 4050) with UTF-8 encoding for native Devanagari and Kannada script rendering, wrapped in a Gradio web application

WORK EXPERIENCE

Npteckz (Software Intern) Sep'25-Feb'26

- Built an AI voice agent in Python handling 5+ command types for voice-based interaction and automated task execution.
- Implemented speech recognition pipeline processing real-time audio input with 85%+ command recognition accuracy.
- Promoted to Team Lead within 2 months; coordinated a team of 4 interns and delivered 3 projects on schedule.

SKILLS

- Languages: Python (Advanced), SQL, Java
- ML Algorithms: Linear Regression, Logistic Regression, SVM, Decision Tree, Random Forest, KNN, Naive Bayes, XGBoost, Gradient Boosting
- DL & NLP: ANN, CNN, RNN, LSTM, Transformers, Attention Mechanism, BERT, Fine-tuning, Sentence Transformers, Embeddings, Neural Machine Translation, MarianMT, NLLB-200, HuggingFace Transformers, PyTorch
- ML Libraries: TensorFlow, Keras, scikit-learn, Pandas, NumPy, Matplotlib
- Deployment: FastAPI, Streamlit, Flask, Gradio, HuggingFace Spaces
- AI & Automation: Speech Recognition, Twilio API
- Database: SQLite
- Tools: Git, GitHub Actions, Jupyter Notebook, VS Code
- Soft Skills: Team Leadership, Problem Solving, Communication

CERTIFICATIONS

Artificial Intelligence Essentials – IBM	April'25
AI for Beginners Crash Course – HP Foundation	May'25
Data Analytics Job Simulation – Deloitte	July'25
Introduction to Generative AI – Microsoft	April'25
Python for Everybody – Google (Coursera)	Feb '25

CO-CURRICULAR ACTIVITIES & HACKATHONS

- Coimbatore Institute Of Technology (CIT) 2026 – 2nd Place
- Jain University Hackathon (JUH) 2025 – Finalist (Top 3 Teams), Jain University
- Smart India Hackathon (SIH) 2024 – Cleared Internal Round (Round 1)
- Capture The Flag (CTF) – Participant, Cloud Club, Jain University
